**Digital Literacy**

Name : Atharav Balaji Khonde

Reg No : 25BAI10734

Branch : BTECH-Computer Science and Engineering (Artificial Intelligence and Machine Learning)

Year : 2025-2029

Course Code : CSE0001

Date : 26/03/2026

## Task 1

### Creating an Infographic

**Tool Used :-**

The digital design tool I used to make infographic on Understanding Digital literacy is Canva. This tool helped me create a visually appealing and informative infographic.

**What the design shows :-**

The design shows the main ideas of digital literacy in a clear and simple way. It begins by explaining what digital literacy means, which is the ability to use digital tools for learning, communication, and everyday tasks. Then, it introduces some useful tools like Google Docs, GitHub, and LinkedIn.

The design also includes important tips for staying safe online. For example, it reminds users to create strong passwords, avoid clicking on unknown or suspicious links, and keep their personal information private. Another section focuses on email etiquette, such as writing clear subject lines, using polite language, and ending messages properly.

**Difficult and interesting thing while making it :-**

One thing I found difficult while making it is to keep information concise while covering every important details in organized , readable and visually appealing way.

One thing I found interesting was how icons, design and spacing can help improve readability , and increase the visual appearance.

## Task 2

### Build Your Student Digital Portfolio

**Platforms I choose :-**

The platforms I choose are Github,Linkden and Kaggle for building student digital portfolio.

**What each one is used for :-**

LinkedIn, Kaggle, and GitHub are simple and useful platforms for learning and growing in your career. LinkedIn helps me connect with people, share what I've done, and look for job opportunities. Kaggle is a good place to practice data science by working on real data and trying competitions. GitHub helps me save my code, build projects, and work with others. Together, these platforms help me learn better, show my work, and connect with people around the world.

**How I plan to use them over the next four years :-**

As a BTech student, I would use these platforms in an easy and steady way. In the first year, I would make my LinkedIn profile and start learning basics, and upload small projects on GitHub. In the second year, I would practice more on Kaggle and share what I learn on LinkedIn. In the third year, I would work on bigger projects, team up with others, and apply for internships. In the final year, I would show all my work and skills on these platforms and use LinkedIn to connect with people and find a good job.

## Task 3

### Explore Coding & Collaboration Platforms

**Platforms used :-**

The platforms I used for doing this tasks are HackerRank for coding platform and Google Forms for creating an Digital Literacy Awareness Quiz.

**What you built or practised :-**

On HackerRank, I created a account to solve a beginner-level coding problem called solve me first , it helped me understand the basicsof coding better and it improved my technical skills , I also felt more confident after completing the challenge and I would like to practice more in the future and I created a “Digital Literacy Awareness Quiz” using Google Forms , I added five questionson digital literacy , including multiple choice and short answer questions , I also linked the form to Google Sheets to see the responses given by others. This made it simple to collect and organize data.

**How these tools will help you academically :-**

HackerRank helps me practice coding and improve my skills step by step. Google Forms and Sheets help me create quizzes, collect information, and stay organized. Overall, I learned useful skills that will me academically with help of this platforms and future career. Hence these tools are very useful for my studies.

## Task 4

### Draft a Professional Email & Etiquette Guide

**one situation where poor digital communication caused a real problem :-**

A common problem with digital communication happens when a student sends an unclear or unprofessional email to a professor about a missed deadline. For example a message like “I didn’t finish, can I submit later, without proper greeting or explanation may be ignored. This can affect how the professor sees the student and reduce the chances of getting an extension The problem is caused by poor tone and lack of clarity.

**what could have been done differently :-**

This could have been avoided by writing a structured email that includes a clear subject line, polite greeting, concise explanation of the situation, and a respectful request ,Using proper tone and formatting demonstrates responsibility and increases the likelihood of a positive response.

## Task 5

### Cybercrime Awareness Case Study & Prevention Guide

**what surprised me the most while researching this topic :-**

While researching UPI and online payment fraud I was surprised by how easily people can get scammed, These frauds are not always done using advanced technology. Most of the time scammers trick people by sending fake payment requests, QR codes, or pretending to be bank officials, I found it shocking that just accepting a payment request can lead to losing money instantly It made me realize that many people fall for these scams because they look real and create a sense of urgency.

**One habit you will personally change as a result :-**

After researching about this topic one habit I would personally change as a result is I would be very carefull while making online payments, I would verify bankers details carefully and verify first with the person before making payment, I would take care no sensitive information is lost like pin while making payment and I wont scan any random Qr code.

**Conclusion :-**

Overall this project helped me better understand how important digital skills are in everyday life, I got to learn and use useful tools like Canva, GitHub, LinkedIn, and Google Forms in a simple and practical way. It also improved how I write emails and communicate professionally online, One of the most important things I learned was about online safety, especially how UPI frauds happen and how to avoid them. This project made me more aware, careful, and confident while using digital platforms and it will definitely help me in my studies and future career.
